Tube assembly/dismantling

Assembly

The prerequisite for ensuring that the inside seal is securely held and protected against damage is that the tube is cut into straight lengths and deburred.

- 1) Insert tubing until the end stop. It is important to ensure that the tubing is inserted into the inside

seal. Depending on the tolerance position of the tubing and the seal, the contact of the tubing with the seal may be wrongly interpreted as the end stop.
2) Check that the tubing connector is securely held by pulling gently on the tube.

Dismantling

- 1) The tubing can be detached easily by pressing and holding down the releasing ring. Remove the tubing carefully from the fitting.

- 2) Before re-using the tubing, remove the damaged part by cutting it off.

- Note

When a push-in sleeve is used as a quick coupling plug, an optimum and safe connection exists only if products from the same family are used.

This means that a NPQH push-in sleeve may be used only with an NPQH push-in connector. The slot in the push-in sleeve must engage securely in the counterpart.
