Key features

Simply "plug and work"	Reliably connected	Captive seal	Orientable
			

The stainless steel retaining claw within the fitting holds the tubing securely without damaging its surface. Vibration and pressure surges are safely absorbed.

A nitrile rubber sealing ring guarantees a perfect seal between standard OD tubing and the body of the fitting. Standard tubing is suitable for use with compressed air and vacuum.

All brass parts of Festo's push-in fittings are nickel plated and are thus highly resistant to corrosion. The tapered ISO R threads have a self-sealing PTFE coating, which allows the fitting to be re-used up to five times without the need for additional sealing components.

The fitting can be aligned after assembly.

## Tube assembly/disassembly

### Mounting

The prerequisite for ensuring that the inside seal is securely held and protected against damage is that the tube be cut to straight lengths and deburred.

- 1) Insert tubing until the end stop. It is important to ensure that the tubing is inserted into the inside

- seal. Depending on the tolerance position of the tubing and the seal, the contact of the tubing with the seal may be wrongly interpreted as the end stop.
- 2) Check that the tubing connector is securely held by pulling gently on the tube.

### Dismantling

- 1) The tubing can be detached easily by pressing down and holding the releasing ring. Remove the tubing carefully from the threaded connector.
- 2) Before re-using the tubing, remove the damaged part by cutting it off.

## Which fitting fit which thread?

### Metric parallel thread

- Cylindrical metric thread is comparable with G thread
- Sealing is guaranteed via a sealing ring
- Sealing on front face

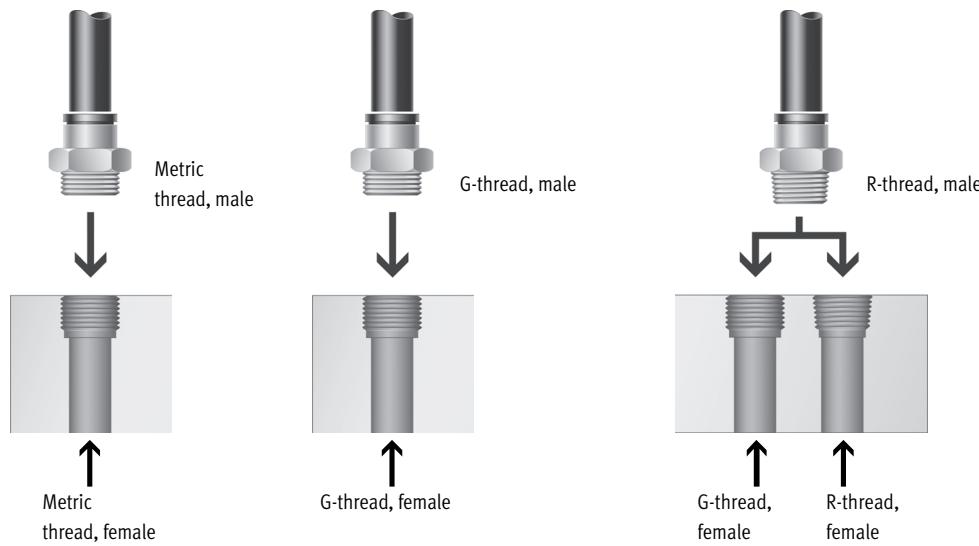

### G parallel thread to ISO 228-1

- Shorter thread
- Constant installation depth
- Replaceable sealing ring
- Sealing on front face
- Can be re-used a number of times thanks to replaceable sealing ring

### R tapered thread

#### to EN 10226-1 and ISO 7/1

- Self-sealing thread
- Sealing via coated threads
- No additional sealing surface required
- Smaller installation dimensions since there is no need for a rebate for the sealing surface
- Can be re-used up to five times

## Recommended tightening torque

When using push-in fittings with internal hex, ensure that the Allen key is not inserted too far into the fitting to prevent the risk of damage to components behind the fitting.

### - Note

All R-threads are coated with a sealing material. This coating replaces the conventional sealing ring. Simply screw in the R-thread by hand and tighten it with 1 or 2 turns of a spanner. The fitting can be reinstalled up to five times. When screwing in R-threads several times, you must make sure that the abraded particles from the sealing material coating cannot enter the compressed air system.
