

Flow sensors SFAH

Flow sensors SFAH

Features

FESTO

At a glance

Communication interface

Universal flow measurement

- 8 flow measuring ranges from 0.002 l/min to 200 l/min
- High measuring dynamics (1:50)
- Available as uni- or bidirectional
- Excellent accuracy
- Optional test report

Quick installation

- No inlet sections required
- Adjustable QS bracket connections
- L1 and M8 plug connector for fast commissioning

Convenient design

- Compact design 20x58 mm
- Degree of protection IP40

Easy operation

- Clear 2-line display
- Configurable, red perimeter of entire display
- Intuitive menu navigation

Switchable electrical outputs

- Various switching functions
- Switching outputs (PNP/NPN, NO/NC)
- Analogue outputs (0...10V, 1...5V, 4...20 mA)

Product description

The flow sensor SFAH is suitable for monitoring compressed air and non-corrosive gases. The sensor can be used in many industry segments thanks to its compact design. The method of measurement is based on the thermal heat-transfer method. The bypass construction means that it is less susceptible to disruption by particles and moisture. The flow value is transmitted to the connected control system as a switching signal, as an analogue signal or via IO-Link®.

Space-saving

Adjustable QS angled connections

Area of application

- Process monitoring
- Handling of extremely small parts
- Monitoring of compressed air consumption
- Leak test
- Monitoring of forming gas
- Pneumatic object detection via air-gap measurement

Functions

- Monitoring and setting a flow rate threshold, a flow rate range or a change in flow rate
- Monitoring using the teach-in function or by entering values
- Mass flow rate and volumetric flow rate are displayed in the common measurement units
- ECO function with option to switch off the display
- Optional security code can be freely chosen (4-digit code)
- Adjustable low-pass filter for smoothing the flow signal
- Scaling the analogue output to increase the signal dynamics
- Offset compensation possible
- Min./max. value memory
- All settings that have been entered on one sensor (master) can be transferred (replicated) to other, identical sensors
- High pressure range –0.9 bar to 10 bar

IO-Link

- Serial communication integrated using IO-Link® 1.1
- Cyclical transfer of two switching statuses and the measured pressure value
- Remote parameterisation of the sensor is possible using an IO-Link® master
- Easy sensor replacement with automatic parameterisation
- Sensor identification, diagnostics and teach-in possible via IO-Link®
